31        <label for="date">date:</label>
32        <input type="date" id="date">
33        <br>
34        <label for="cv">Cv :</label>
35        <input type="file" name="cv" id="cv">
36        <br>
37        <button>Submit</button>
```

Output:

Login Page

Full Name:

Gender male female others

Gmail:

Phone :

Position Applied

Avoid Fake Information

date:

Cv : No file chosen

Notes:

Forms

form:

 → creates
one single
space

type → attribute (additional element of the element)
Types of input types:

- 1) text 2) password 3) Number 4) Submit 10) na
 - 5) button 6) tel 7) radio 8) email 9) file
- (value = button
value)

value:

- * value attribute is used to specifies the value of an <input> element. The value attribute is used differently for different input types.
- * For elements, the value attribute sets the value of listed items (for ordered lists).

Form and its attributes:

- ↳ An HTML form is used to collect user info.
- ↳ The user input is most often sent to a server for processing.
- ↳ The <form> element is a container for all types of input elements, such as: text & checkboxes, radio buttons, submit button.
